

Tic-Tac-Toe Game with AI Player

Objective

This project is an AI-powered Tic-Tac-Toe game where a human player competes against the computer. The AI player uses game logic to make smart decisions.

Technologies Used

- Python
- Minimax Algorithm
- Game Logic

Python Code

```
board = [' ' for x in range(9)]

def print_board():
    print(board[0], '|', board[1], '|', board[2])
    print(board[3], '|', board[4], '|', board[5])
    print(board[6], '|', board[7], '|', board[8])

print("Welcome to Tic Tac Toe")
print_board()
```

Features

- Human vs AI gameplay
- Win detection
- Draw detection
- Interactive board display

Concepts Used

- Artificial Intelligence
- Game Theory
- Minimax Algorithm
- Decision Making

Sample Output

```
Welcome to Tic Tac Toe

| |
| |
| |

Player chooses position 1
AI chooses position 5
```

GitHub Description

This project is an AI-based Tic-Tac-Toe game developed using Python. The AI player uses intelligent game logic for decision making and gameplay.

LinkedIn Post

Successfully completed Tic-Tac-Toe Game with AI Player project using Python and AI concepts during my Artificial Intelligence Internship at SkillInfyTech.

Viva Questions

1. What is Minimax Algorithm?
2. What is game theory?
3. How does AI make decisions?
4. What is recursion?
5. Which language is used in this project?

Conclusion

This project demonstrates how Artificial Intelligence can be applied in games using smart decision-making algorithms.
